Platinum temperature sensor in thin-film technology

M-series platinum temperature sensors are characterized by long-term stability, excellent precision over a wide temperature range and compatibility. They are used particularly for applications with high consumption volumes, typically in the automotive, white goods, HVAC and energy generation industries as well as in medical and industrial appliances and machinery.

The measuring point for the nominal resistance is defined at 8mm from the end of the sensor body.

Specification

DIN EN 60751

Temperature range

-70°C to +500°C (continuous operation)
(temporary use to 550°C possible)

Tolerance Class B: -70°C to +500°C
Tolerance Class A: -50°C to +300°C
Tolerance Class 1/3 B: 0°C to +150°C

Temperature coefficient

TCR = 3850 ppm/K

Leads

Pt clad Ni- wire
Recommend connection technology:
Welding, Crimping and Brazing

Lead lengths (L)

10mm ±1mm

Long-term stability

Max. R₀ drift 0.04% after 1000h at 500°C

Vibration resistance

At least 40g acceleration at 10 to 2000 Hz, depends on installation

Shock resistance

At least 100g acceleration with 8ms half sine wave, depends on installation

Ambient conditions

Use unprotected only in dry environments

Insulation resistance

> 100 MΩ at 20°C; > 2 MΩ at 500°C

Self heating

0.4 K/mW at 0°C

Response time

Water current (v= 0.4m/s):
  t₀.5 = 0.06s
  t₀.9 = 0.18s
Air flow (v= 2m/s):
  t₀.5 = 3.1s
  t₀.9 = 10.5s

Measuring current

100Ω: 0.3 to 1.0mA
(self heating has to be considered)

Note

Other tolerances, values of resistance and wire lengths are available on request.

We reserve the right to make alterations and technical data printed. All technical data serves as a guideline and does not guarantee particular properties to any products.
