

## Solvent-Based Clevios™

### Waterless conductive polymer for solvent-based polymer systems

New polythiophene-based systems from Heraeus Epurio:

- Waterless, non-aqueous, intrinsically conductive, transparent polymers
- Antistatic / dissipative effect ( $< 10^9$  Ohm/sq) at low dosage ( $< 3\%$ )
- Compatible with many polymer systems such as polyacrylates

Polythiophene (Clevios™ P SB 12) dispersed in anisole/butanol

Solvent compatibility	Clevios™ P SB 6	Clevios™ P SB 12
Sheet resistance (Ohm/sq) of undiluted polythiophene	$1 \times 10^4$	$2 \times 10^5$
PGME	No	Yes
Butylbenzoate	Yes	Yes
Isopropanol	No	Yes
PGMEA	Yes	Yes
Ethanol	No	Yes
Toluene	Yes	Yes
Butylacetate	Yes	Yes
Ethylacetate	No	Yes

Solvent compatibility of water-free polythiophene dispersions

## Solvent-Based Clevios™ Formulations

Antistatic properties of solvent-borne hard coat and adhesive formulation

$< 10^9$  Ohm/sq

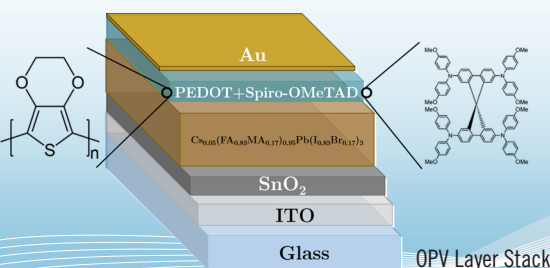

- Electronic conductivity
- High optical transmission

New solvent-based Clevios™ can add antistatic functions to adhesive and hard-coating formulations

## Solvent-Based Clevios™ for Solar Cells

Perovskite solar cells require waterless hole-transport layers

- Clevios™ HTL Solar 3 and 4 are waterless, solvent-based polythiophene dispersions that can be coated on the perovskite layer:
  - High transparency and conductivity compared to traditional hole-transport layers
  - Facile processing
  - Waterless, non-aqueous

CLEVIOS™	Solvent	Resistivity
HTL Solar 3	waterless, in toluene, acidic	$1 - 1k \Omega\text{-cm}$
HTL Solar 4	waterless, in anisole, non-acidic,	$1 - 1k \Omega\text{-cm}$

Clevios™ HTL Solar 3 and 4

PV performance	
$J_{sc}$ [mA/cm <sup>2</sup> ]	21.6
$V_{oc}$ [V]	1.19
FF	0.73
PCE[%]	18.7
