
TOTAL THERMAL MANAGEMENT SOLUTION FOR SEMICONDUCTOR FROM HERAEUS QUARTZ GLASS

Quartz glass is the essential material/parts for semiconductor process, which can help process to be operated in high purity environment. During the high temperature semiconductor process, the temperature/temperature field in the Machine chamber must be manipulated very precisely. Developed together with the industry, Heraeus designed and supplied the total thermal management solution with our special material Clear fused quartz glass (HSQ), Opaque quartz glass (OM) and Black quartz glass(HBQ), which help semiconductor industry to update to leading-edge technology node.
