## **Application Engineer (m/f/d) / Knowledge Manager (m/f/d) Train & Promote**

Location Kleinostheim

Full time

permanent

### **About YAGEO Nexensos**

We are the expert for reliable temperature sensors, also at extreme temperatures and in demanding applications. As the world market leader in platinum thin-film technologies, we offer sensor elements and assemblies with the highest quality standards. This enables the creation of reliable and sustainable applications, allowing us to make a meaningful contribution to key global challenges such as promoting clean air, energy efficiency, and resource conservation. After years of growth in the Heraeus Group, we have recently become part of the YAGEO Group since April 1st, 2023. This allows our sensor business to grow further so we can exploit our synergies in the best possible way.

### **What you can expect:**

#### **Train & Promote**

- In your role, you will be responsible for maintaining and expanding the technical knowledge base (collecting data and preparing it in presentations) and for creating webinar content, including delivery.
- You will also conduct training for employees, customers and distributors on Nexensos solutions and approaches.
- You will be responsible for creating white papers, web content and product information sheets as well as providing technical support to the sales team.

#### **Customer Application**

- You will conduct meetings with customers and discuss their applications.
- Your tasks include the adaptation of existing products and the generation of new sensor assembly solutions.
- Furthermore you are responsible for the preparation of preliminary calculations for modifications and new assembly approaches and maintain the Excel based calculation tool.
- The implementation, monitoring and definition of processes for sample production, including transfer to project management in the case of an order and the support of reverse engineering processes for analysis purposes, including the creation of reports rounds off your job profile.

### **What you bring with you:**

- Bachelor of Engineering, Master of Science or similar qualification
- Knowledge in the field of assembly and connection technology (mechanical, electrical) is an advantage
- Experience in sensor technologyProject experience with suppliers as well as customersCustomer oriented approach
- At least five years of professional experience
- Very good written and spoken English skills
- Confident in using MS Office tools and basic knowledge of SAP
- Confident conversational skills in dealing with external partners
- Affinity for social media
